

One-Minute Answers to Skeptics

with Charlie Campbell from AlwaysBeReady.com

“There’s absolutely no evidence God exists!”

I find it interesting you’ve concluded that. Might I ask you a question? What are some of the supposed evidences you’ve rejected? What books have you read wherein the author lays out what he thinks is evidence for God? I’m sure you’ve read some of them before concluding “There’s absolutely no evidence God exists!”

I think there’s compelling evidence for God. For example, consider the human body. Your body has 206 bones, about 700 muscles, and a heart that beats over a 100,000 times a day as it pumps about 75 gallons of blood an hour through more than 60,000 miles of veins, arteries, and capillaries. The eyes you’re looking through right now are composed of more than two million working parts. Do you really believe all those muscles, bones, and organs pieced themselves together and started functioning apart from a designer?

What tells the cells and organs in your body how to function and what to do? It’s the DNA inside the cells. The DNA in every one of your body’s 37 trillion cells contains a staggering amount of information. Where did this information come from? Bill Gates said DNA is like a computer program but far more advanced than anything Microsoft has ever created. The British molecular biologist, Francis Crick, an atheist and one of the two scientists who discovered DNA, “estimates the odds that intelligent life exists on the Earth as the result of non-directed chance to be around 1 in 10 to the two billionth power.” Now of course you’re free to believe life came about by non-directed, natural causes. I wouldn’t bet against God’s existence with such overwhelming odds. It would be far wiser to conclude that the incredible complexity we find in living organisms is the result of an intelligent designer—God.
